DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed July 2, 2008, with respect to independent Claims 4, 5, 20, and 22 have been fully considered and are persuasive. The rejection of Claims 4, 5, 20, and 22 has been withdrawn.

Allowable Subject Matter

2. **Claims 4, 5, 20, and 22 (now respectively renumbered 1 – 4)** are allowed.

3. The following is an Examiner's statement of reasons for allowance:

The closest prior art discloses focus detecting device including a manual range setting unit, a motor driver circuit, variable-magnification amplifier, a lens, and a CPU, wherein the motor driver circuit accepts motor control signals from either the manual range setting unit or from the CPU for performing manual focus control or automatic focus control, respectively.

However, the closest prior art does not teach or fairly suggest a relay unit at least including a first switching signal input means for controlling a focus lens by switching between automatic focal point detection focusing and remote commands from a remote control unit, wherein an input terminal is communicably coupled to a first remote command generating means for performing remote operations to control the focus lens, and wherein output signals from the first switching signal input means are multiplexed with remote command control signals output from the first remote command generating means.

Art Unit: 2622

4. Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Cited Prior Art

5. The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure for the following reasons:

- **US 5,884,107** discloses a lens controller including a switching means for switching between a signal determining circuit and a control signal.
- **US 6,801,259 B2** discloses a control apparatus for an optical device including a selection means for selecting with a CCU signal and a demand signal.
- **US 6,903,775 B2** discloses a lens unit with a switch for switching between a local control and remote control of the focusing system.
- **US 5,896,171** discloses a video signal processing apparatus to multiplex a video and control signal.
